                                                                                                                                                                                                                                                                                                                                                                                                                             CURRENT APPLICATION DATA:

SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/306,546C
FILING DATE: September 15, 1994
CLASSIFICATION: 435
ATTONNEY/AGENT INFORMATION:
NAME: Smith Deann F.
REGISTRATION NUMBER: 36,683
REFERENCE/POCKET NUMBER: 6550-00003
TELECOMMUNICATION INFORMATION:
TELEPHONE: (810)641-1600
INFORMATION FOR SEQ ID NO: 24:
SEQUENCE CHARACTERISTICS:
LENGTH: 10 amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COMPUTER READABLE FORM:

Patent No. 5843648
GENERAL INFORMATION:
APPLICANT: ROBEINS, PAUL F.; ROSENBERG,
APPLICANT: STEVEN A.
TITLE OF INVENTION: DIS AND TYROSINASE
TITLE OF INVENTION: MELANOMA ANTIGENS AND THEIR USE IN DIAGNOSTIC
TITLE OF INVENTION: AND THERAPEUTIC METHODS
NUMBER OF SEQUENCES: 23
                                                                                                                                                                                                                                                                  ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 10, Application US/08318970B
Patent No. 5589573
GENERAL INCORMATION:
APPLICANT: Hideaki HAGIWARA, et al.
TITLE OF INVENTION:
AMINO ACID SEQUENCES OF ANTI-IDIOTYPIC
TITLE OF INVENTION:
AMINO ANTIBODIES AGAINST ANTI-CANCER HUMAN MONOCLONAL ANTIBODY
TITLE OF INVENTION:
AND DNA BASE SEQUENCES ENCODING THOSE SEQUENCES
NUMBER OF SEQUENCES:
48
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                APPLICANT: DUFFIN, DAVID J.

APPLICANT: DUFFIN, DAVID J.

APPLICANT: MERRILL, BARBARA MCGOWEN

APPLICANT: MERRILL, BARBARA MCGOWEN

APPLICANT: SCHATZ, PETER JOSBEH

TITLE OF INVENTION: COMPOUNDS HAVING AFFINITY FOR THE GRANULOCYTE-COLONY

TITLE OF INVENTION: STIMULATING FACTOR RECEPTOR (G-CSFR) AND ASSOCIATED TITLE OF INVENTION: USES

FILE REPERENCE: 0300-0014

CURRENT APPLICATION NUMBER: US/09/620,091

CURRENT APPLICATION NUMBER: US/09/620,091

CURRENT APPLICATION NUMBER: US/09/620,091

CURRENT APPLICATION NUMBER: US/09/620,091

Patent No. 6303118
GENERAL INFORMATION:
APPLICANT:
TITLE OF INVENTION: A human chitinase, its recombinant
TITLE OF INVENTION: production, its use for decomposing chitin, its use
TITLE OF INVENTION: in therapy or prophylaxis against infection diseases.
NUMBER OF SEQUENCES: 16
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
